LNG supply projects and regasification plants | Shell Global

LNG supply projects and regasification plants Shell has LNG supply projects either in operation or under construction in 10 countries. Once at its destination, LNG is turned back into a gas by warming so that it can be piped to customers.

LNG Cryogenic Storage Tanks & Regasification | Chart ...

Cryogenic Storage Tanks and Regasification Each of our mega cryogenic storage tanks holds enough LNG to cover the average family's energy demand for 500 years. Natural gas is stored as LNG at very low temperature (-260 F / -162 C), where it occupies 1/600th the volume of natural gas in gaseous state.

LNGcold solutions Increase regasification capacity ...

During regasification of approx. 3,000 m³/h LNG into 1,800,000 m³/h natural gas, 200 MW refrigerating capacity is lost to the environment. At a LNG terminal (port), more than 100 MW refrigerating capacity at down to -50 C can be recovered at a pressure of 80 bar, substituting 100 MW el. and saving more than 480,000 t/a CO₂.

Excelerate Energy FSRU Technology

LNG supplies are delivered to our FSRUs through periodic

transfers from traditional LNG carriers in accordance with our Ship-to-ship (STS) LNG transfer protocol. The process is composed of a conventional LNG carrier mooring alongside the FSRU and transferring its cargo to the FSRU via flexible cryogenic hoses. The regasification of LNG continues uninterrupted throughout the STS LNG transfer
