[Chemistry Notes for class 12 Chapter 15 Polymers](#) The word polymer has a Greek origin, which means many units (parts). Polymer is defined as a chemical substance of a

high molecular mass formed by the combination of a large number of simple molecules, called monomers. e.g., Polymerisation The process by which the monomers get combined and transformed into polymers, is known as polymerisation. n

The Basics: Polymer Definition and Properties

A polymer can be a three dimensional network (think of the repeating units linked together left and right, front and back, up and down) or two-dimensional network (think of the repeating units linked together left, right, up, and down in a sheet) or a one-dimensional network (think of the repeating units linked left and right in a chain). Each repeating unit is the -mer or basic unit.
